

Plumbing • Rooter • Heating • Air  
Water Softeners • Sprinkler Repair

With the power outage that happened last night, we wanted to let you know that some water softeners have internal programming that can be lost during a power outage. So while you are going through your home, resetting the times of your clocks, check your water softener to make sure its working properly.

If you notice anything strange with your softener and would like some help, give us a call. Because of the power outage, we will come out at no charge to take a look and help you out.

Thank you for being our customer!

Sincerely,

Advanced Home Services
